280144	OVVO Carbide Tipped router cutter for V-0930	1

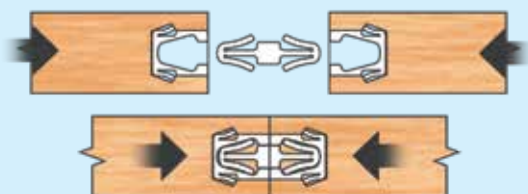

Assemble furniture quickly and efficiently

Increase production by up to 60%

Patented

New assembling system

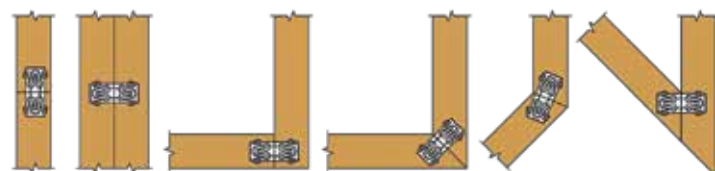

The OVVO connection system not only cuts down on assembly time but also allows furniture to be flat packed saving time and space. Once slots are routed it is not necessary to use any further tools, screws or glue to assemble the pieces. The OVVO connection system is a three piece jointing system available as a releasable or permanent solution.

Invisible and detachable.

The action is simplicity itself, all you have to do is press them together and wait for the 'click' which indicates that the joint has seated. This invisible solution, with an internal automatic clamp, creates a perfect union between workpieces.

The OVVO™ connectors system allows a variety of joints and angles.

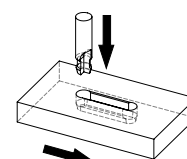

OVVO Cutter

Sizes 12mm / 12.7mm (½")
Available in Solid Carbide and Diamond

Milling

(1.) Plunge Depth: 12.7mm + - 13.1mm (max)
